Meet the Eclectus Parrot!

Eclectus parrots are easily recognizable by their striking gender dimorphism.

Males are bright green with orange beaks, while females are mostly red with black beaks.

The Eclectus parrot is a stunning bird Native to the Solomon Islands,

New Guinea, northeastern Australia, and nearby islands.

Eclectus parrots are intelligent and affectionate, often mimicking human speech and enjoying interactive toys. They have a long digestive tract, which means they thrive on a high-fiber diet of fruits, vegetables, and nuts.

These parrots can live up to 30 years, making them wonderful long-term companions.
